## 1. Introduction

This file is a template to assist authors in writing new articles for ATOMIC DATA AND NUCLEAR DATA TABLES. It employs the package `adndt` and the class `elsarticle`.

This file is typeset using in the preamble the command `\documentclass[reviewcopy]{elsarticle}` which produces one-column layout with double line spacing for reviewing. *This is the format to be used for the version submitted for review!*

If you have not done so already, please read the *Information for Authors* published at the back of issues before beginning.

## 2. Section Title

This version is a prototype for an article with a long introduction which needs several numbered `\section` headings. Correct section numbering is obtained by using the command `\setcounter{secnumdepth}{3}` in the preamble.

In case your introductory text is short, use only one `\section` command, `\section{Introduction}`, and use `\subsection` commands to produce the remaining headings. Don't forget to change to `\setcounter{secnumdepth}{0}` in the preamble.

Taking into account what was said above, use as many sections, subsections, and subsubsections as you need. This is an example of section text.

### 2.1. Subsection Title

For example, this is a `\subsection`.

#### 2.1.1. Subsubsection Title

This is a `\subsubsection`.

*Paragraph Title.* This is a named `\paragraph`. This is the lowest level of section headings.

## 3. Equations

Here are some sample equations. The `LATEX` equation and math environments have been redefined in the `elsarticle.cls` document class, but this should not cause any difficulties.

The equations

$$p(t, x, y) = (2\pi t)^{-m/2} \exp(-|x - y|^2/2t) \quad (1)$$

and

$$e_k \leq c \cdot \begin{cases} 1 & \text{if } 1 \leq k \leq \log n \\ \left(\frac{\log(\frac{n}{k}+1)}{k}\right)^{1/p-1/q} & \text{if } \log n \leq k \leq n \\ 2^{-\frac{k-1}{n}} n^{1/q-1/p} & \text{if } k \geq n \end{cases} \quad (2)$$

both fit in a single column and also in two-column format.

For references to the equations, use the command `\eqnref` in order to obtain the correct format for the journal style, as in Eq. 1 and 2. Below is an example of how to obtain subequation numbers and references to them.

$$\begin{aligned} \rho(\mathbf{r}, t) &= -e\psi_f^*(\mathbf{r}, t)\psi_i(\mathbf{r}, t) = \rho(\mathbf{r})e^{+i\omega t}, \\ \rho(\mathbf{R}, t) &= +e\Psi_f^*(\mathbf{R}, t)\Psi_i(\mathbf{R}, t) = \rho(\mathbf{R})e^{-i\omega t}, \end{aligned} \quad (3a)$$

$$\begin{aligned} \mathbf{J}(\mathbf{r}, t) &= \psi_f^*(\mathbf{r}, t)\hat{J}_{\text{el}}(\mathbf{r}, t)\psi_i(\mathbf{r}, t) = \mathbf{J}(\mathbf{r})e^{+i\omega t}, \\ \mathbf{J}(\mathbf{R}, t) &= \Psi_f^*(\mathbf{R}, t)\hat{J}_{\text{nucl}}(\mathbf{R}, t)\Psi_i(\mathbf{R}, t) = \mathbf{J}(\mathbf{R})e^{-i\omega t}. \end{aligned} \quad (3b)$$

In Eq. 3  $\psi(\mathbf{r})$  and  $\Psi(\mathbf{R})$  are the electron and proton wavefunctions in the initial (*i*) and final (*f*) states, and in Eq. 3b  $\hat{J}_{\text{nucl}}$  is the proton current operator.

## 4. Reference Guidelines

For formatting of references, please see the Information for Authors in the journal or on the journal home page for samples of correct formatting. The references in this document give some guidelines for ATOMIC DATA AND NUCLEAR DATA TABLES.

Only references directly cited in the text will appear, such as [1, 2]. Numeric ranges are automatically compressed, like in [3–6].

## Acknowledgments

The acknowledgments, if used, should be placed after all sections, but before appendixes. Produced with the `\ack` command.

## Appendix

Text of the appendix. Numbered equations in appendixes have the section numbers attached to them:

$$\operatorname{div} \cdot \vec{\mathbf{B}} = 0 \tag{A.1}$$

### A.1. *This is also an appendix*

Text of a subsection in appendix.

This is how an unnamed appendix looks. You must use the command `\section*{}` for a appendix without a title. Such an appendix doesn't produce an entry in the Table of Contents.

### *Note added in proof*

A note added in proof, if there is one, should be the final text before the references.

## References

## Figures

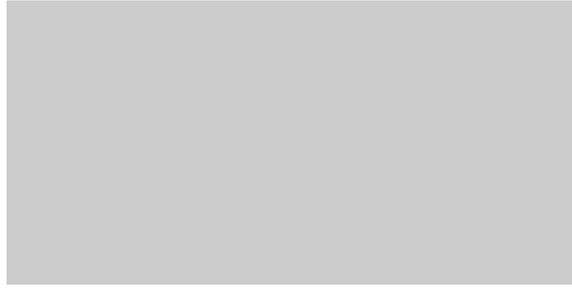

The figures that appear in the introduction text should follow the References in the review copy. Note how the optional argument `[ht!]` in the `figure` environment is used for forcing the placement of the figures.

**Fig. 1:** This is the caption for the first figure. This figure belongs to the introductory text.

**Fig. 2:** This is the caption for the second figure. This figure belongs also to the introductory text.

**Fig. 3:** This is the caption.

The figure above was included as follows (for details of the use of the `\includegraphics` command, see the documentation of the `graphicx` package):

```
\begin{figure}[ht!]  
\begin{center}  
\includegraphics{FigA}  
\caption{This is the caption.}  
\end{center}  
\end{figure}
```

The tables that are part of the introductory material should be located after the figures, one table per page.

Table A

The logical structure that manuscripts to be submitted to ATOMIC DATA AND NUCLEAR DATA TABLES should follow.

| Command   | Explanation                  |
|---|------------------------------|
| <code>\begin{frontmatter}</code>                    | Titlepage material           |

## Explanation of Tables

The table captions and explanation of the symbols used in the tables must be given here. The use of the `\tabular` environment is recommended.

Please note that the explanations below are just examples and don't correspond to the tables that follow later in this template.

**Table 1. Adopted values of  $B(E2)\uparrow$  and related quantities**

(Throughout this table, italicized numbers refer to the uncertainties in the last digits of the quoted values.)

|                       |   |
|-----------------------|---|
| Nuclide               | The even $Z$ , even $N$ nuclide studied   |
| $E(\text{level})$     | Energy of the first excited $2^+$ state in keV either from a compilation or from current literature   |
| $B(E2)\uparrow$       | Reduced electric quadrupole transition rate for the ground state to $2^+$ state transition in units of $e^2b^2$   |
| $\tau$                | Mean lifetime of the state in ps<br>$\tau = 40.81 \times 10^{13} E^{-5} [B(E2)\uparrow / e^2b^2]^{-1} (1 + \alpha)^{-1}$ (see Table 4 for the $\alpha$ values when $\alpha > 0.001$ )   |
| $\beta$               | Deformation parameter<br>$\beta = (4\pi/3ZR_0^2)[B(E2)\uparrow / e^2]^{1/2}$ , where<br>$R_0^2 = (1.2 \times 10^{-13} A^{1/3} \text{cm})^2$<br>$= 0.0144 A^{2/3} b^2$   |
| $\beta_{(\text{sp})}$ | $\beta$ from the single-particle model<br>$\beta_{(\text{sp})} = 1.59/Z$  |
| $Q_0$                 | Intrinsic quadrupole moment in b<br>$Q_0 = \left[ \frac{16\pi}{5} \frac{B(E2)\uparrow}{e^2} \right]^{1/2}$  |
| EWSR(I)               | $E \times B(E2)\uparrow$ expressed as a percentage of $S(\text{I})$ [see Eq. (4) with proton mass used for $m$ ]<br>$S(\text{I}) = 30e^2(\hbar^2/8\pi m)AR_0^2 = 7.13A^{5/3} \text{keV}\cdot e^2b^2$ [ $S(\text{I})$ is the (nearly) model-independent sum-rule<br>$E2$ strength] |
| EWSR(II)              | $E \times B(E2)\uparrow$ expressed as a percentage of $S(\text{II})$<br>$S(\text{II}) = S(\text{I})(Z/A)^2$ [ $S(\text{II})$ is the sum-rule isoscalar $E2$ strength]   |

**Table 2. Dirac-Fock ICCs for all elements from  $Z=10$  to  $Z=120$**

|                       |   |
|-----------------------|---|
| $Z$                   | Atomic number                             |
| $A$                   | Mass number                               |
| $K, L_1, \text{etc.}$ | Atomic shell, subshell, etc.              |
| $E_\gamma$            | Gamma-ray energy in keV                   |
| Total                 | Sum of partial ICCs for all atomic shells |

**Table 3. Values of  $B(E3; 0_1^+ \rightarrow 3_1^-)$  determined from miscellaneous procedures**

|   |  |
|---|--|
|   | When given, the italicized numbers refer to the uncertainties in the last digits of the quoted values.   |
| Nuclide   | Even $Z$ , even $N$ nuclide studied  |
| $B(E3; 0_1^+ \rightarrow 3_1^-)$                                  | Reduced electric-octupole transition rate, in $e^2b^3$   |
| Method  | Method employed in the measurement   |
| $(d, d') (\theta)(E)$   | Semiempirical relationship between $B(E3; 0_1^+ \rightarrow 3_1^-)$ value and cross-section for $(d, d')$ at angle $\theta^\circ$ and bombarding energy $E$ (in MeV)   |
| $^{181}\text{Ta}(p, 2n\gamma)^{180}\text{W}$                      | Analysis of $\gamma$ decay in $^{181}\text{Ta}(p, 2n\gamma)^{180}\text{W}$   |
| $\gamma$  | Model-dependent analysis of $\gamma$ -ray transitions  |
| $(t, t'), (d, d'),$<br>$(p, p'), (^{17}\text{O}, ^{17}\text{O}')$ | } From cross section in $(t, t'), (d, d'), (p, p')$ and $(^{17}\text{O}, ^{17}\text{O}')$ relative to $^{208}\text{Pb}$ , assuming $B(E3; 0_1^+ \rightarrow 3_1^-) = 0.611 \pm 0.009 e^2b^3$ for $^{208}\text{Pb}$ |
| References  | References keyed to the list following Table 7   |

The multi-page data tables should be typeset using the `\longtable` environment. Note that there is no need to put any extra pagebreaks or horizontal lines manually, each table runs continuously from beginning to end. See the examples below.

## Explanation of Graphs

### Graph 1. Dirac-Fock ICCs for Selected Elements.

|                        |                              |
|------------------------|------------------------------|
| $Z$                    | Atomic number                |
| $K, L_1, \text{ etc.}$ | Atomic shell, subshell, etc. |
| $E_\gamma$             | Gamma-ray energy in keV      |

### Graph 2. Another Graph showing Dirac-Fock ICCs for Selected Elements.

|                        |                              |
|------------------------|------------------------------|
| $Z$                    | Atomic number                |
| $K, L_1, \text{ etc.}$ | Atomic shell, subshell, etc. |
| $E_\gamma$             | Gamma-ray energy in keV      |

Although this template contains all its tables (and figures) it is possible to have separate files for the introductory text and the tables.

If you have the data tables in separate files, like 'table1.tex', 'table2.tex' etc., use the following form:

```
\include{table1}  
\include{table2}
```

**Table 1**Experimental Data on  $B(E2)\uparrow$  Values. See page 8 for Explanation of Tables

| $B(E2)\uparrow$ ( $e^2b^2$ )         | $\tau$ (ps) | Method     | Reference                |
|--------------------------------------|-------------|------------|--------------------------|
| $^4_2\text{He}_2$ 27420 90 keV       |             |            |                          |
| $^6_2\text{He}_4$ 1797 25 keV        |             |            |                          |
| $^8_2\text{He}_6$ 3590 60 keV        |             |            |                          |
| $^{10}_2\text{He}_8$ 3240 200 keV    |             |            |                          |
| $^6_4\text{Be}_2$ 1670 50 keV        |             |            |                          |
| $^8_4\text{Be}_4$ 3040 30 keV        |             |            |                          |
