**Information for Authors**

**Asian Pacific Journal of Tropical Biomedicine**

**GENERAL**

Asian Pacific Journal of Tropical Biomedicine is sponsored by Asia-Pacific Tropical Medicine Press and aims to set up an academic communicating platform for scholars of tropical medicine and related sciences.

The Journal invites concise reports of original research in all areas of tropical medicine and related fields, both experimental and clinical, including modern, traditional and epidemiological studies, from any part of the world. However, manuscripts submitted primarily on authors’ own research on internationally important topics will be accepted. Short communications and letters to the editor are also welcome. Authors are requested to submit a covering letter indicating that their manuscript represents original unpublished material that has not been and will not be published elsewhere (accepted). This restriction does not apply to results published as abstracts or communications, letters to the editor or as preliminary reports. By submitting a manuscript, the authors warrant that they have obtained permission to use any copyrighted or previously published materials.

**Conflict of interest**

All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding.

**Copyright**

The submission of a manuscript by authors implies that they automatically agree to assign exclusive copyright to the Asian Pacific Journal of Tropical Biomedicine if the manuscript is accepted for publication. The work should not be published elsewhere in any form without the written permission of the Asian Pacific Journal of Tropical Biomedicine. All rights of the articles published in the Asian Pacific Journal of Tropical Biomedicine are reserved. No part of this publication may be reproduced, translated or transmitted in any form or by any means (electronic, mechanical or otherwise) without permission from the Asian Pacific Journal of Tropical Biomedicine.

**Ethics**

Human experiments should be performed only in accordance with the ethical standards provided by the responsible committee of the institution and in accordance with the Declaration of Helsinki (as revised in Edinburgh 2000), available at http://www.wma.net/e/policy/b3.htm. Animal experiments carried out by the institution at which the research was carried out. All investigations of human or animal subjects must include a statement that the subject gave informed consent. Patient anonymity should be preserved. Photographs need to be cropped sufficiently to prevent human subjects being recognized or an eye bar should be used.

**Short communications**

Short communications not exceeding two printed pages, including title, author affiliations, references, and one figure or table, are acceptable for rare publication if requested by the authors.

**Letters to the editor**

Criticisms or comments of less than 500 words and five references are welcome. Preference is given to letters related to articles published in the Asian Pacific Journal of Tropical Biomedicine.

**MANUSCRIPT CONTENTS**

**Authors**

All authors should have participated sufficiently in the work to take public responsibility for the content. Written approval signed by all authors should be presented with the manuscript.

**Manuscript**

The manuscript should be submitted online through our email, later on through our website, and the text should be double spaced and have wide margins. The title page must be submitted separately. The title page should contain, on separate lines, the title of the manuscript, the name(s) of the author(s), and the mailing address, telephone and fax numbers, and email address of the corresponding author. The title should be informative, specific, and concise. Serialization of articles into parts is not permitted; such articles may be submitted independently with self-sufficient titles.

**Keywords and Abstract**

Provide 4-5 words or phrases for indexing purposes, using terms from the latest US National Library of Medicine's Medical Subject Headings (MeSH) browser list at [http://www.nlm.nih.gov/mesh/home.html](http://www.nlm.nih.gov/mesh/home.html). If appropriate, MeSH terms are not available, other suitable terms may be used. Full-length submissions should include an abstract of up to 250 words in structured form, consisting of an Objective, Methods, Results, and Conclusion.

**Text**

The text should include the following sections. The Introduction summarizes the rationale, provides a concise research background (not an exhaustive review) and states in one sentence the objective of the study. Do not include any results, or the conclusions of the study. The Materials and Methods provide technical information about the study. Do not describe methodological details that have been published previously. Specifications in using the manufacturer, city, and the country should be given for the main drugs, chemicals, and instruments. Indicate the statistical methods used and identify statistical significance using superscript a and b following the data ($P < 0.05, P < 0.01$). The Results are the findings, supplying N units in a sample, the number of effective digits is determined by the variation within the sample, that is, one-third of the standard deviation. Digits may be separated into groups of three by a small space. Use horizontal rules only. The Discussion deals with the interpretation of the results and their comparison with those of other studies. Do not repeat the results, do not review the literature, do not repeat textbook knowledge and do not cite references that do not have a close relationship with the present results. End with a brief conclusion linking back to the aim of the study.

**Abbreviations**

The use of abbreviations, except for units of measure, is discouraged. Authors may use abbreviations in the text if they are widely used, and they should be replaced with updated ones. The authors are responsible for the correctness of abbreviations. Abbreviations are numbered consecutively in the order in which they appear in the text. Cation should be labelled in superscript parenthesis and should appear in front of the period or comma at the end of the sentence/phrase. All abbreviations should be cited.

**References**

Please supply figures 1.5 to 2 times the size at which they will be finally reproduced. For line work, submit black-ink drawings of high quality. Micrographs or other glossy photographs must be of the highest quality. If a figure comprises more than one glossy photograph, these should be marked A, B, C, etc. Figure legends should be marked clearly in the corresponding letter. Legends should contain sufficient details to permit figure interpretation without reference to the text. Scale markers should be indicated in the photographs. Color plates are also welcome. The choice of cover art illustration will be made by the Editor.

**Journals**

The Journal advocates the citation of new papers; old references are better replaced with updated ones. The authors are responsible for the correctness of references. References are numbered consecutively in the order in which they appear in the text. Citation should be labelled in superscript parenthesis and should appear in front of the period or comma at the end of the sentence/phrase. All references should be cited. References should be listed in numerical order in the Reference section. Journal titles should be abbreviated according to the list of journals Indexed in Index Medicus or MEDLINE ([www.nlm.nih.gov](http://www.nlm.nih.gov)). Please note that no periods are used after the authors' initials or journal abbreviations. A period is used at the end of each reference. The type and punctuation of references is consistent with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals of the International Committee of Medical Journal Editors (http://www.ICMJE.org). Some examples are as follows:

**References**

Journal article more than six authors (list first six and add et al.)

**Book**

Chapter in a book:

**Acknowledgments**

Authors should obtain written permission for everyone acknowledged by name, since readers may infer their endorsement of the paper and its conclusions.
